

Corti is like a “GPS” for patient interviews, **reducing misdiagnosis by** using **Artificial Intelligence** to guide the medical professional to the right decision.

The hardest and most critical
patient decision happens
before the hospital.

Each vertical supplements the next.

01

Emergency Medical
Services

02

Hospital
Departments,
e.g. maternity
wards.

03

Interviews,
e.g. psychiatric
evaluations.

27 Marconi Rd. New York, NY 10023

Unconscious

The Corti AI is able to listen to calls in real-time and provide decision support.

Results From Denmark and USA

84% Accuracy

Cardiac Arrest diagnostic accuracy was increased from 72% to 84%

25% Faster

Corti helped dispatchers detect Cardiac Arrest over 25% faster

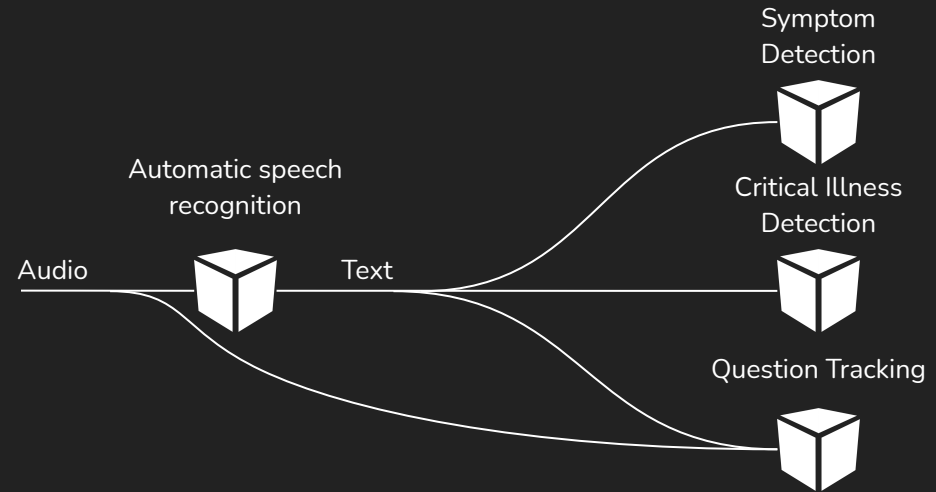

50% Fewer Mistakes

Diagnostic errors decreased by almost 50%

Corti's machine learning service consists of many interacting models.

Most of our models depend on the Automatic Speech Recognition (ASR) model.

Generating Speech from Transcripts

Generating low-resource languages audio samples
from machine-translated text

Generating Speech from Transcripts

The project

Acquiring training data is expensive, labelling even more so.

Modern generative processes can generate high-quality audio samples from text.

Combined with machine translation, generate inexpensive data for low-resources languages.

Generating Speech from Transcripts

The project

"Is he
conscious and
awake?"

"Is he
conscious and
awake?"

WaveNet

Examples of Text-to-speech

Training on only audio (human-sounding, meaningless)

Audio + text

Audio + text, conditioning on speaker's identity

Generating music

Generating Speech from Transcripts

Project Structure

Translate transcripts
using machine
translation

Generate audio using
WaveNet

Train an ASR model

What we're expecting of you

You have a strong mathematical background and you are comfortable with theory-dense topics

You possess strong coding skills and you are familiar with a Deep Learning development tool (PyTorch, Keras, Tensorflow)

You can conduct experiments in a scientifically-sound way and you are effective in communicating your results
